

Participants:

Vincent Eckert, Jürg Gutknecht, Rolf Grau, Bernhard Hämmerli, Katarzyna (Kasia) Hämmerli, Peter Jaberg, Wolfgang Lehmann, Masoud Mazhari, Niklaus Meyer, Seán Murphy, Knud Niebur, Daniele Puccinelli

Location: Umweltarena Spreitenbach

Agenda:

13:30 Introduction

14:00 Tour of exposition with special attention to the technology applied at the energy-autonomous building in Brütten

15:00 Coffee break

15:30 Green IT 2.0 next steps

17:00 Status projects and experience exchange

18:00 End of meeting

1. Introduction

We are pleased to welcome Peter Jaberg as a new member in our group. The focus of the meeting is the energy-autonomous apartment building in Brütten and Green IT 2.0, the development of the Green IT SIG.

2. Introduction and tour of the Umweltarena

The first energy-autonomous apartment building in the world was recently inaugurated in Brütten near Winterthur. It does not have a grid connection, includes 9 apartments which are rented out, gets its energy all from photo voltaic cells, etc. A model of this building is exposed in the Umweltarena in Spreitenbach. Building and energy expert Renato Nüesch, introduced showed us how this energy self-sufficiency could be achieved with special attention to the ICT solutions applied. Read also the comments about the ICT support on our website.

3. Green IT 2.0

Our future strategy, organization and mode of operation (Green IT 2.0) was further developed by Vincent, Christen and Rolf and presented and discussed intensively at the meeting. The results of the discussion are documented in the **slide presentation** on our website by red comments. The business development team asks you to fill out a [survey](#) to help in finding the best possible solution. To assist the members of the Green IT SIG to run the survey a skype meeting will be held on November 21, 2016 08:00 – 09:00. Vincent Eckert will send out an invitation for the skype meeting in the next days. The content of the solutions are further detailed in the email of the Business Development Team in the same distribution as these minutes.

4. Status of Green IT projects and activities (not discussed because of time)

- The EnergieSchweiz data center project goes into the next phase, the campaign will likely start early next year
- Discussions are underway to formalize the relationship asut – Green IT SIG and work closer together
- The content of our assessments and the actual software (we think of a GPL license) has to be protected legally and proposals by Rolf have to be decided and implemented
- The Memorandum of Understanding (MoU) between Green IT Amsterdam – Green IT SIG has been signed and published on our website
- A workshop with Green IT Amsterdam will be organized to start the cooperation
- Green IT SIG supports the initiative “BAUEN DIGITAL SCHWEIZ” and is a partner organization

5. **Next meeting**

The next meeting is planned in the December/January time period. A doodle will be sent out in due time.

Many thanks for all your contributions

Klaus
